BEZALEEL NWABIA
Senior Backend Engineer

Enugu, Nigeria (**GMT+1/CET Friendly**) • +234 9061147343 • **bez.nwabia@gmail.com** •
linkedin.com/in/bezaleel-nwabia • github.com/bazzscript • bezaleelnwabia.vercel.app

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL (PostgreSQL, MySQL), Go (Ecosystem Familiarity), HCL.
- **Frameworks & Libraries:** NestJS, FastAPI, Express.js, Laravel, Next.js, Node.js Core, Gin, Echo.
- **Databases & Caching:** PostgreSQL, MongoDB, Redis, MySQL, Firebase Suite (Firestore, Cloud Functions), Supabase.
- **Cloud & Infrastructure:** AWS (Lambda, S3, RDS), SST (Serverless Stack), Docker, Railway, Azure, Git/GitHub Actions (CI/CD).
- **Architecture & Methodology:** Distributed Systems, RESTful APIs, WebSockets, Event-Driven Architecture, Microservices, CQRS, Role-Based Access Control (RBAC), Idempotency & Transaction Processing, GDPR Compliance.
- **AI Tools**: Cursor, Codex, Google Antigravity

PROFESSIONAL EXPERIENCE

INTELLIGENT FOOD SOLUTIONS. — Abuja, Nigeria
Senior Backend Engineer and C.T.O — SEPT 2025-Present

- **Full-Stack Architectural Ownership:** Serving as the sole technical owner architecting and engineering the entire "MealCondo(https://www.mealcondo.com/home)" startup ecosystem across web, cloud infrastructure, and four distinct cross-platform mobile applications.

- **Cross-Platform Client Engine:** Programmed, tested, and shipped multi-tenant native mobile applications for iOS and Android using React Native and Expo, delivering decoupled workflows tailored for normal consumers and professional chefs respectively.

- **Dual-Framework Microservices:** Engineered a high-availability infrastructure combining a Node.js (NestJS) core system for transactional business logic alongside a dedicated Python (FastAPI) engine built exclusively to drive asynchronous AI compute workloads.

- **Deterministic RAG Assistant:** Constructed localized Retrieval-Augmented Generation (RAG) pipelines and vector semantic search using LangChain to power the MealCondo AI Assistant, enforcing context boundaries that strictly restrict LLM conversations to internal recipe and market databases.

- **Data-Driven AI Generation Pipelines:** Authored automated optimization algorithms that analyze platform-wide meal and nutrition metadata to compile personalized, constraint-bounded weekly meal plans for premium subscribers.

- **High-Volume Media Delivery:** Designed a highly available media pipeline leveraging AWS S3 for secure blob storage, coupled with Cloudinary CDN caching configurations to optimize real-time processing and edge-delivery of image and video streams.

- **Executive Control & Administrative API Architecture:** Engineered a centralized executive admin portal and API layer, implementing secure role-based access control (RBAC), transactional audit logs, and real-time database monitoring endpoints to allow leadership to track platform metrics and system state.

- **Algorithmic Recommendation Engine (FreshMeal):** Authored *FreshMeal*, a two-tower embedding recommendation microservice that ranks recipe entities via weighted scoring vectors (cuisine attributes, user dietary constraints, and popularity signals) combined with MMR diversity filtering. Built a session-based cold-start pipeline for unauthenticated users and stateful embedding updates as interaction weights accumulate, replacing static queries with an optimized, low-latency discovery API.

PASSONCOLOGY — Greater London, United Kingdom
Senior AI & System Engineer — August 2026

- **Support Email Automation Agent ("Michael"):** Engineered an AI-driven support agent that ingests inbound customer emails, parses query intents against custom skill files, and auto-drafts contextual replies into Zoho Mail for human review, preventing duplicate processing via database tracking.

- **RAG Knowledge Base & Textbook Grounding:** Built a centralized PDF/textbook RAG knowledge base for PassOncology AI services, grounding assistant responses in verified textbook metadata and enabling precise in-text citations without model hallucinations.

- **Question-Aware AI Practice Assistant:** Architected a stateful practice assistant that maintains context of active exam questions across web and mobile navigation, enabling seamless "explore with assistant" flows without losing user session state.

- **Cross-Platform Study Notes Infrastructure:** Designed full-stack notes endpoints and database schemas enabling web and mobile learners to save, edit, and retain elaborated practice explanations, complete with automated cascade deletion on account removal.

PASSONCOLOGY — Greater London, United Kingdom
Senior Backend Consultant — August 2026

- **Backend System Decoupling:** Redesigned a monolithic backend architecture into a decoupled microservices ecosystem, building a lightweight Hono.js core API to isolate business logic from client applications.

- **Dedicated AI Microservice Architecture:** Engineered an isolated Python (FastAPI) backend service to manage direct AI provider integrations, routing model requests through the core API layer to streamline state management and third-party API exposure.

- **Database Migration & Schema Portability:** Authored custom database migration scripts to transition core schemas, user state, and transactional data from Supabase to a managed Railway PostgreSQL cluster.

- **End-to-End Test Automation:** Wrote exhaustive unit testing suites across all backend endpoints and microservice communication pipelines, validating system behavior and executing a seamless production release in under two weeks.

MESiERE (DEVOTIONHUB) Greater London, United Kingdom
Senior Backend Engineer (Remote) July 2025-June 2026

- **API & Core Systems Design:** Handled complete end-to-end engineering lifecycles to design, test, and release high-performance, type-safe REST APIs powering core content delivery and user asset management systems.

- **Serverless Systems at Scale:** Scaled and maintained the main serverless backend infrastructure using SST (Serverless Stack) and AWS Lambda, sustaining a 99.9% uptime track record under high-volume production loads.

- **Velocity Optimization:** Modularized tightly coupled service layers and streamlined local developer workflows, reducing feature-to-production turnaround times by 30% within 3 months.

- **Real-Time Data Streams:** Architected and deployed low-latency, real-time communication microservices utilizing WebSockets to handle concurrent live data synchronization and active user interactions without main-thread blocking.

- **AI Feature Orchestration:** Engineered automated, high-throughput pipelines leveraging the OpenAI API for real-time text-to-audio processing, metadata extraction, and multi-document automated AI content review.

- **Structural AI Integrity:** Implemented a structural AI gatekeeper validation layer that parses and sanitizes asynchronous user content against strict platform compliance guidelines prior to relational database insertion.

QUICKLEAP Lagos, Nigeria
Lead Software Engineer July 2024-January 2026

- **Multi-Product Engineering Management:** Spearheaded the core technical direction and backend system logic for 3 distinct business categories (Logistics, FinTech, and B2B Commerce), aligning codebase capabilities with 6-month growth metrics.

- **Infrastructure Optimization:** Orchestrated a comprehensive platform migration from Azure to Railway, automating continuous integration/continuous deployment (CI/CD) pipelines and minimizing server compute overhead.

DADOFOOD Enugu, Nigeria
Backend Engineer August 2022-July 2025

- **Smart Order Routing:** Architected a proximity-based geospatial routing engine to dispatch real-time orders dynamically to the nearest available logistics agent, maximizing delivery turnaround efficiency.

- **API Ecosystem Expansion:** Authored, documented, and scaled specialized endpoint boundaries for three distinct platform nodes: Android/iOS client discovery apps, real-time vendor inventory management dashboards, and internal corporate admin panels.

- **Database Concurrency Optimization:** Optimized relational schemas and constructed precise composite indexes in PostgreSQL, removing row-level database locking during peak order volume and reducing query latency spikes by 60%.
- **FinTech & Ledger Engineering:** Designed and scaled the core transactional ledger and multi-party wallet infrastructure, handling secure financial calculations and settlements for over 5 million monthly transaction cycles.

FORCYTHE — Lagos, Nigeria
Backend Engineer — Jan 2024 -Sept 2024

- **High-Volume API Development:** Programmed high-scale RESTful APIs driving the Perime.co location platform, facilitating geospatial querying, venue routing, and real-time user-to-city coordination.

- **Ticketing & Wallet Microservices:** Designed backend wallet engines to store, track, and liquidate event ticket revenue securely, executing clean accounting separations across diverse user roles.

EDUCATION

ENUGU STATE UNIVERSITY OF SCIENCE AND TECHNOLOGY — **Enugu, Nigeria**
Bachelor of Engineering - B.Eng, Computer Engineering — 2015 – 2020

- **Core Focus:** Software Engineering, Distributed Architectures, Relational Database Management Systems.
