BEZALEEL NWABIA
Full Stack Mobile & Web Engineer

Enugu, Nigeria (**GMT+1/CET Friendly**) • +234 9061147343 • **bez.nwabia@gmail.com** •
linkedin.com/in/bezaleel-nwabia • github.com/bazzscript • bezaleelnwabia.vercel.app

TECHNICAL SKILLS

- **Frontend & Mobile Engineering:** React Native, Expo, React.js, Next.js, TypeScript, JavaScript, HTML5/CSS3, State Management (Redux Toolkit, Context API, Zustand).
- **Backend Frameworks:** Node.js, NestJS, Express.js, FastAPI (Python), Laravel, Go (Ecosystem Familiarity).
- **Databases & Caching:** PostgreSQL, MongoDB, Redis, MySQL, Firebase Suite (Firestore, Cloud Functions, Realtime Database), Supabase.
- **Cloud, Infrastructure & CDNs:** AWS (Lambda, S3, RDS), SST (Serverless Stack), Cloudinary CDN, Docker, Railway, GitHub Actions (CI/CD).
- **Architecture & Client-Server Design:** RESTful APIs, WebSockets (Real-Time Sync), Event-Driven Architecture, Microservices, UI/UX Implementation, Client-Side Caching, App Store/Play Store Deployment.
- **AI Tools**: Cursor, Codex, Google Antigravity

PROFESSIONAL EXPERIENCE

INTELLIGENT FOOD SOLUTIONS. — Abuja, Nigeria
Senior FullStack Engineer & CTO — SEPT 2025-Present

- **Full-Stack Architectural Ownership:** Act as sole technical owner engineering the complete frontend, backend, and cloud matrix powering the active "mealcondo.com" startup ecosystem.

- **Cross-Platform Client Apps:** Architected, styled, and published 4 distinct native mobile applications across iOS and Android utilizing React Native and Expo, dividing operational workflows cleanly between standard consumer interfaces and specialized chef portals.

- **High-Fidelity Web Frontend:** Developed a responsive web ecosystem leveraging Next.js and TypeScript, handling complex page components, semantic optimization, and low-latency interaction logic.

- **Executive Observability & Admin Portal:** Built a full-stack executive admin dashboard using Next.js and TypeScript, engineering real-time data visualizers, operational audit logs, and secure admin API endpoints to give leadership full visibility into platform analytics and user activity.

- **Personalized Recommendation UI & ML Pipeline (FreshMeal):** Built *FreshMeal*, a two-tower embedding recommendation feature that processes weighted signals (cuisine, dietary preferences, popularity) and MMR diversity sampling. Engineered session-based state management to handle guest cold-starts on web and mobile, dynamically updating the client UI with personalized *Daily Inspiration* feeds as user interaction weight accumulates.

- **AI Feature Integration:** Connected the client applications to an isolated Python (FastAPI) microservice running LangChain-driven RAG pipelines, delivering a deterministic AI client chat assistant and data-driven client meal-plan generation dashboards.

- **Media Delivery & Caching:** Managed a media deployment architecture combining AWS S3 asset containers with a Cloudinary CDN caching layer, ensuring optimized edge delivery of food imagery and chef video streams across the apps.

PASSONCOLOGY — Greater London, United Kingdom
Senior AI & System Engineer — August 2026

- **Support Email Automation Agent ("Michael"):** Engineered an AI-driven support agent that ingests inbound customer emails, parses query intents against custom skill files, and auto-drafts contextual replies into Zoho Mail for human review, preventing duplicate processing via database tracking.

- **RAG Knowledge Base & Textbook Grounding:** Built a centralized PDF/textbook RAG knowledge base for PassOncology AI services, grounding assistant responses in verified textbook metadata and enabling precise in-text citations without model hallucinations.

- **Question-Aware AI Practice Assistant:** Architected a stateful practice assistant that maintains context of active exam questions across web and mobile navigation, enabling seamless "explore with assistant" flows without losing user session state.

- **Cross-Platform Study Notes Infrastructure:** Designed full-stack notes endpoints and database schemas enabling web and mobile learners to save, edit, and retain elaborated practice explanations, complete with automated cascade deletion on account removal.

PASSONCOLOGY — Greater London, United Kingdom
Senior Fullstack & System Consultant — August 2026

- **Full-Stack Decoupling & Architecture:** Led the architectural transition of a high-revenue web app from a monolithic Next.js setup to a modular system supporting multi-client architecture (web and native mobile).

- **Multi-Tier API Integration:** Unbundled direct web-to-AI calls by establishing a Hono.js core API layer and a Python (FastAPI) AI microservice, standardizing data flow across web and mobile client applications.

- **Database & Infrastructure Migration:** Developed migration scripts to safely move production data from Supabase to a Railway PostgreSQL database while maintaining continuous service for active paying users.

- **Production Rollout & Quality Assurance:** Authored end-to-end unit test suites covering the web frontend, backend APIs, and microservice layer, completing testing and production deployment within two weeks.

MESIERE (DEVOTIONHUB) — Greater London, United Kingdom
Senior Backend Engineer (Remote) — July 2025-June 2026

- **API & Core Systems Design:** Handled complete end-to-end engineering lifecycles to design, test, and release high-performance, type-safe REST APIs powering core content delivery and user asset management systems.

- **Serverless Systems at Scale:** Scaled and maintained the main serverless backend infrastructure using SST (Serverless Stack) and AWS Lambda, sustaining a 99.9% uptime track record under high-volume production loads.

- **Velocity Optimization:** Modularized tightly coupled service layers and streamlined local developer workflows, reducing feature-to-production turnaround times by 30% within 3 months.

- **Real-Time Data Streams:** Architected and deployed low-latency, real-time communication microservices utilizing WebSockets to handle concurrent live data synchronization and active user interactions without main-thread blocking.

- **AI Feature Orchestration:** Engineered automated, high-throughput pipelines leveraging the OpenAI API for real-time text-to-audio processing, metadata extraction, and multi-document automated AI content review.

- **Structural AI Integrity:** Implemented a structural AI gatekeeper validation layer that parses and sanitizes asynchronous user content against strict platform compliance guidelines prior to relational database insertion.

QUICKLEAP — Lagos, Nigeria
Lead Software Engineer — July 2024-January 2026

- **Multi-Product Engineering Management:** Spearheaded the core technical direction and backend system logic for 3 distinct business categories (Logistics, FinTech, and B2B Commerce), aligning codebase capabilities with 6-month growth metrics.

- **Infrastructure Optimization:** Orchestrated a comprehensive platform migration from Azure to Railway, automating continuous integration/continuous deployment (CI/CD) pipelines and minimizing server compute overhead.

FORCYTHE — Lagos, Nigeria
Backend Engineer — Jan 2024 -Sept 2024

- **High-Volume API Development:** Programmed high-scale RESTful APIs driving the Perime.co location platform, facilitating geospatial querying, venue routing, and real-time user-to-city coordination.

- **Ticketing & Wallet Microservices:** Designed backend wallet engines to store, track, and liquidate event ticket revenue securely, executing clean accounting separations across diverse user roles.

DADOFOOD — Enugu, Nigeria
Backend Engineer — August 2022-July 2025

- **Client Node Expansion:** Coded, documented, and scaled operational structures for three separate application endpoints: consumer iOS/Android ordering apps, real-time partner dashboard widgets, and global management control panels.

- **Geospatial Tracking Integration:** Integrated proximity-based tracking and routing logic into mobile frontends, feeding real-time delivery routing updates to active courier applications.

- **FinTech App Integration:** Hooked high-scale wallet modules into billing system (Paystack), setting up clear frontend transaction states and secure processing loops across 5 million transaction cycles.

- **Database Concurrency Optimization:** Reworked backend PostgreSQL schemas and index mapping, removing locking bugs during heavy ordering traffic to resolve UI latency drops by 60%.

EDUCATION

ENUGU STATE UNIVERSITY OF SCIENCE AND TECHNOLOGY **Enugu, Nigeria**
Bachelor of Engineering - B.Eng, Computer Engineering 2015 – 2020

- **Core Focus:** Software Engineering, Distributed Architectures, Relational Database Management Systems, User-Centered Interface Design.
